

JOB DESCRIPTION

The scientific writer will be responsible for writing out all scientific content to be published by Stilla Technologies (articles, application notes, online content, etc.) according to the highest scientific standards, for peer-reviewed publications, as well as for Marketing purposes. To achieve this goal, extensive interaction will be required with both the R&D and Marketing teams. The scientific writer will be expected to contribute to existing projects (corporate website, blog, scientific publications, etc.) as well as demonstrate scientific interest by contributing new topics of discussion on digital PCR or related domains. A strong technical expertise in molecular biology is needed to ensure adequate understanding of the technology.

Job description and Tasks

- Provide high quality scientific writing for both printed and online content
- Understand complex scientific information, theories and practices to write-up results for marketing materials and peer-reviewed publications
- Be able to maintain a blog aiming to teach people on digital PCR and spread knowledge
- Monitor technological developments and keep up with scientific and industry trends and innovations
- Improve existing documentation and deliver quality document for sales purposes
- Ensure writing complies with in-house style guides, adapting the tone and style of your writing when necessary.
- Extensively liaise with R&D and Marketing/ Sales to ensure adequate transfer of information, accurate representation of the company R&D results, and response to customer's demands.

Qualification & Skills

- MSc or PhD in Life Sciences
- Expertise in Molecular Biology

- Excellent written skills. An excellent command of English (mother tongue or mother-tongue level) is mandatory for this position
- Content Writing experience in a professional business context
- Experience in web content writing (online magazines, corporate blogs, personal blogs, freelance writing...)
- Ability to research, summarize, and conceptualize information.
- Ability to manage/prioritize multiple simultaneous projects from conception to completion, working in a fast-paced environment.
- Producing articles for publication on multiple supports both printed and online – with predefined style and respecting the deadlines.
- A keen scientific interest
- Team-oriented
- Proactive
- Interest in visual communication and graphic design would be a plus
- A knowledge of web content and SEO basics would be a plus.

Location

This position is based in Villejuif, France, located south of Paris.

Home-office is also possible.

Salary

Depending on experience.

About Stilla Technologies

Stilla Technologies, a fast-growing, Paris-based European start-up company, is recruiting a Scientific Writer, with expertise in molecular biology, to oversee scientific communications on our innovative R&D projects on Stilla's Naica™ System for Crystal Digital™ PCR.
